DIRECTORY OF MEMBERSHIP

This list of members was prepared by PSA Headquarters as of November 1, 1955. Names and addresses are followed by a code indicating LIFE and CORNERSTONE MEMBERS, Divisional affiliation and month and year of joining PSA. When no Division letters appear, it means that Headquarters has no record of affiliation with a Division. A geographical index will be found at the back.

Every effort has been made to insure the accuracy of the listings, but your cooperation in checking your own name, address, and Division is earnestly requested. Errors can be corrected only with your help. Communications should be addressed to PSA Headquarters, 2005 Walnut Street, Philadelphia 3, Pennsylvania.

The code used is as follows:

†–Cornerstone Member
††–Life Member
●–Travel Aid
C–Color Division
M–Motion Picture Division
N–Nature Division
J–Photo-Journalism Division
P–Pictorial Division
S–Stereo Division
T–Technical Division
*–Deceased

Because of space limitations, all miscellaneous memberships, subscriptions, etc., have been omitted.

Extra copies of this Directory Section, separately stapled, may be purchased by members only from PSA Headquarters, 2005 Walnut St., Philadelphia 3, Penna., at $1.00 payable with order.

Use of this Directory for sales solicitation is made without the approval or sanction either of PSA or of PSA JOURNAL. PSA Members are reminded that it is impossible to provide the convenience of a membership list without risking its use for sales or other commercial purposes. Such use constitutes no endorsement by PSA or by PSA JOURNAL of products or services thereby offered.

the camera to measure all others by....Bolex-H

Whatever his field of interest, the man of discrimination searches first for the one product – the one example of craftsmanship at its very finest – to serve as the criterion to measure all others by. In home movie cameras, that touchstone is the superb H-Series Bolex.

Whether 16 mm or 8 mm, the H cameras have almost unlimited versatility for obtaining professional-like results. Yet they are easy to handle and simple to operate.

All the cameras of this series have the same superb features – 3-lens revolving turret, eye-level focus, parallax corrected viewfinder, speeds from 8 to 64 frames per second, single frame and footage counter, full reverse rewind – and many, many others. The 8 mm H cameras are unquestionably the finest 8 mm cameras that can be obtained. They have the additional advantage of great economy in operation. Using double-run 8 mm film, the 100-foot roll gives the equivalent projection time of 400 feet of 16 mm film.

There are four fine cameras in the H-series priced as follows (including Federal Excise Tax):

16 mm with F:1.9 lens		8 mm with F:1.9 lens	
H-16 Leader	$269.50	H-8 Leader	$269.50

SUPER TECHNIKA

3rd

OF A SERIES

Linhof VERSATILITY

In the last 25 years camera design has made significant strides—keeping pace with general photographic progress and the great advances made both in optics and film chemistry. There is no longer a heated contention between the relative merits of the 'small' versus the 'large' negative — or the supposed disadvantages of either.

While all cameras — subminiature, miniature, reflex, roll-film, stereo, sheet film, and others — are intended for taking pictures, each is, in most instances, particularly suitable for specific applications. And while each of these cameras may be pressed into use for other types of work — they are not all equal in their versatility.

The reflex, for example, has brought greater ease to composition, but has not particularly extended the camera's usefulness beyond taking pictures. There is much to be said for the adaptability of the miniature. But, basically, its greatest contribution to the cause of photography has been as a medium for candid, unposed, action pictures — under available light conditions.

It would appear, that among them all, the sheet film camera takes first place for inherent versatility. The Linhof Super Technika alone establishes this beyond any doubt. It has, in fact, been referred to as the world's most versatile camera.

To start with (and the Super Technika shares this advantage in common with all sheet film cameras) there is a greater variety of sheet film emulsions than all other types combined — for practically every possible requirement in photography: commercial, process, portraiture, industrial scientific, etc. And, with the larger negative size, there is virtually complete freedom from grain and critical processing problems.

This alone would commend the large camera for the greatest number of photographic applications. But, there is more — much more. The Super Technika owes its versatility, not merely to the great variety of film emulsions available. It is the one camera with every conceivable facility for doing the great variety of tasks which arise in photographic work. To own a Linhof Super Technika is to be best equipped in photography.

These features alone may give you some idea of the vast scope of this remarkable instrument:

- **Built-in Multifocus Rangefinder** with *optical prism* for maximum brilliance and accuracy.
- **Couples to as many lenses** as desired by *simply and easily* interchangeing coupling cams.
- **Extra Large** coupling cams for most *precise tracking* to focusing curve.
- **3-Section Track Assembly** and *triple extension* bellows allow extreme closeup photography and the use of longer tele lenses.
- **Revolving Back** permits choice of vertical or horizontal format without altering camera position or removing from tripod.
- **Camera Movements** — horizontal, vertical and diagonal back swings—together with rising, falling, tilting, shifting and swinging lens standard — for control of perspective distortion and depth-of-field.
- **2-Position Drop Bed**
- **Rapid Lens Interchangeability** — the *world's finest lenses* to choose from — Linhof-tested and approved.
- **All-metal Construction** — precision tooled and luxuriously finished.

These are all added advantages which you do not find in any other camera in the field — and which you can enjoy for very little more than the cost of conventional equipment.

Copies of this and previous ads describing Super Technika features may be obtained by writing to the address below. Descriptive literature and price information will be included. Super Technika cameras are made in 2¼ x 3¼", 4 x 5 and 5 x 7.

PSA Honors and Requirements

STATEMENT OF POLICIES

"PSA Honors are awarded in recognition of contributions to the advancement of the art and science of photography. Such contributions take many forms which may generally be divided into those resulting principally from proficiency and achievement and those primarily of a service nature. Since personal achievement alone does not necessarily contribute to the advancement of photography, it does not qualify the candidate unless combined with elements of service. (See the Fellowship and the Associateship.) On the other hand, service may contribute substantially to the advancement of photography even though the candidate's proficiency in the use of the medium may be limited. (See the Honorary Membership and the Associateship, category 11.) PSA Honors are not degrees of membership nor recognition of proficiency alone."

THE HONORARY FELLOWSHIP is the highest Honor awarded by the Society. It is awarded only for unique or outstanding contributions of major importance to photography. The unanimous approval of the Honors Committee and the unanimous approval of the Board is required and the number of living Honorary Fellows is limited to 25. Candidates need not be members of the Society.

THE HONORARY MEMBERSHIP is awarded for outstanding service to photography, particularly through organizational or similar work. Proficiency in the use of the photographic medium is not a requirement. It may be recommended by a three-fourths vote of the Honors Committee and requires a three-fourths vote of the Board for approval. Candidates need not be members of the Society.

THE FELLOWSHIP is awarded for outstanding contributions to the advancement of photography involving a high degree of proficiency and achievement combined with such elements of service as the dissemination of acquired knowledge by lecturing, judging, instructing, publishing of articles, papers, etc. Personal achievement alone does not qualify a candidate for this Honor. The Fellowship may be awarded by a three-fourths vote of the Honors Committee.

THE ASSOCIATESHIP is awarded for material contributions to the advancement of photography, whether resulting primarily from proficiency and achievement or service alone. As in the case of the Fellowship, achievement must be combined with elements of service. The Associateship may be awarded by a majority vote of the Honors Committee.

Examples of Qualifications In The Various Fields of Photography

1—MONOCHROME PICTORIAL (Including portraiture)
Since pictorial photography is closely allied with exhibiting and competitions, considerable weight will be given to the candidate's exhibition and competition record, awards for pictorial merit, promotion of salons and exhibitions, the judging of exhibitions, etc.

2—COLOR
As in the case of monochrome pictorial photography, weight will be given to the candidate's exhibition record, organization and promotion of salons and exhibitions, judging, etc. Mastery of creative design, composition and color harmony are important qualifications. Proficiency and achievement in the use of color photography in fields other than pictorial may be considered under this category or, if incidental, may be considered collateral in the field of major endeavor.

3—MOTION PICTURE
Exceptional ability in directing, producing, processing, editing, titling films and mastery of techniques for producing effects, accompanying sound, etc. will be considered, as will any other contributions to the art and science of motion picture photography.

4—PHOTO-JOURNALISM, Documentary and Other Reportorial Photography
Ability in this area as indicated by the publication of candidate's work in newspapers, magazines, trade journals, house organs, etc., as well as illustrations for books or publicity and public relations, will be considered.

5—NATURE
Weight will be given to the candidate's exhibition record, etc., but the inclusion of his work in museums of natural history, and the use of his pictures as illustrations for books, articles and lectures on nature as well as his scientific background are considered important.

6—PHOTOGRAPHIC RESEARCH and Development of Processes and Apparatus
The degree of responsibility for the initiating, directing and results of the research or development is considered the important factor in evaluating his qualifications in this category. This field includes the photographic aspects of photomechanical work. Published reports of work, listed as to title, date and place of publication as well as patents issued are considered indicative of the candidate's accomplishments.

7—SCIENTIFIC AND TECHNICAL PHOTOGRAPHY
In this category achievements in the application of specialized photography to scientific, industrial and commercial fields will be considered. This includes photomicrography, medical photography, spectrography, astronomy, X-ray, high-speed photography and aerial photography. New applications of photography to the solution of problems are important. Weight will be given to papers published and patents granted.

8—PROFESSIONAL PHOTOGRAPHY
In this category achievements in professional work in creative, commercial, illustrative and portrait photography and the promotional or advertising type of industrial photography will be considered.

9—GRAPHIC ARTS
In this field creative work in the application of the photographic aspects of photomechanical reproduction by any process will be considered.

10—EDUCATION
Consideration will be given to the organization, supervision and teaching of photographic classes; the writing, publishing or editing of photographic publications; and similar educational activities.

11—ORGANIZATION AND PROMOTION of Photographic Activities
The organization and direction of camera clubs, councils, exhibitions and other group activities and the dissemination of knowledge through lectures and writing for or editing local publications, arranging programs, etc., as well as noteworthy service to PSA will be considered as qualifications for the Associateship. Outstanding or unique service of a similar nature are qualifications for the Honorary Membership. Such service is also a collateral qualification for the Fellowship, which is awarded primarily for contributions to the advancement of photography through proficiency and achievement in the use of the medium.
THE HONORS COMMITTEE MAY IN ITS DISCRETION WAIVE ANY OF THE SPECIFIC REQUIREMENTS WHEN SUCH WAIVER IS NOT INCONSISTENT WITH THE OBJECTIVES OF THE SOCIETY AND ITS POLICIES. IT MAY ALSO AWARD HONORS OTHER THAN THOSE REQUESTED WHEN IT DEEMS THEM MORE APPROPRIATE TO THE QUALIFICATIONS OF THE CANDIDATE.

The Statement of Policies above is based on a report of the 1952-53 Honors Committee. It is basically true, but bear in mind that each year the Honors Committee revises the rules for the following year to overcome inequities and maintain the high standards set for these awards. It is possible you may encounter minor deviations in the latest instructions from the Honors Committee in which case the instructions prevail.

Honors Deadline

April 1 is the deadline for receipt of honors nominations at Headquarters. If you have a candidate for honors, ask HQ for the necessary forms early, read the instructions carefully and act promptly.

New Kodak **PANATOMIC-X** Film for the sharpest shots you've ever made!

- **Here's the all-new modern version of a famous film . . . new micro-fine grain, high resolution, superior acutance for sharper pictures . . .**
- ***Plus* balanced panchromatic sensitivity . . . crisp, brilliant tone rendering . . . good exposure latitude and underexposure tolerance . . .**
- ***Plus* new rapid processing that gives you a fully developed negative in 7 minutes . . . enlargements from *dry* negatives in half an hour or so . . .**
- **Your Kodak dealer has it now in 35mm and all the most popular roll sizes—ready to go to work for you.**

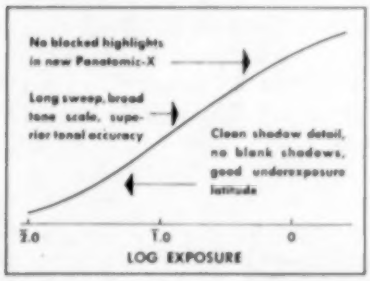
Imagine film grain so fine you can barely find it . . . image sharpness that lives up to the quality of your finest lens . . . fast developing and fast drying that lets you start printing from *dry* negatives about half an hour after your film went into the developing tank . . . a whole stack of big enlargements before bedtime the same evening . . .

That's the new Panatomic-X.

And it's not just a film for the 35mm fan. It will be equally welcome to meticulous workers in the larger roll-film sizes . . . experimenters who like to do radical cropping right on the enlarging easel . . . experts who enjoy the thrill of super-size blowups, up and up from small sections of a fine-textured negative.

New kind of sharpness

Where does all the extra Panatomic-X quality come from? Partly from the new emulsion techniques that gave you ultra-

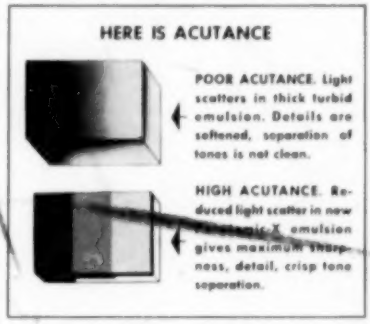


speed Kodak Tri-X Film, the new faster Plus-X, and high-speed Ektachrome. And from two more new developments—

1. An emulsion with less "light scatter" between the silver crystals.

2. A new wide-range *ultra-thin* emulsion—50 percent thinner than micro-grain films already on the market!

These two factors add up to superior *acutance* (see box)—they assure you the utmost in image sharpness, fine detail,



and crisp tone separation. (Incidentally, a film can have high "resolving power" and fine grain, but if the acutance is poor, the picture detail will be mushy.)

High speed, wide tone range

Old-type ultra-thin emulsions suffer from too much contrast, poor tone scale, low exposure latitude, low speed. But the new Panatomic-X has a curve similar to Tri-X (see box)—which means better exposure latitude, wide tone scale with no blocked highlights or blank shadows, and improved operating speed.

The Panatomic-X exposure indexes are 25 daylight, 20 tungsten. These, however, include the usual safety factor to insure full normal exposure. Finer grain is obtained with a correct minimum exposure that just retains shadow detail. This means that with correctly adjusted equipment, you can adopt a daylight index of 50. Workers who prefer thinner negatives for rapid enlarging may choose to adopt an index even higher, with some sacrifice of shadow detail.

High-speed processing

The new roll-film Panatomic-X develops in 7 minutes in Kodak D-76; the 35mm, 7 minutes in D-76 diluted 1-to-1. We then recommend 1 to 2 minutes in Kodak Rapid Liquid Fixer, 2 minutes in Kodak Hypo Clearing Agent, 5 minutes in running water, and 15-to-30-minute drying in a current of warm air . . . *and you're ready to start printing.*

For line work, documentary copies, and the like, you can give longer, stronger development and get very high contrast. Special fine-grain developers are not needed with this micro-grain film, and we recommend that you do not use them.

In all Kodak Tri-X Film sizes

Your Kodak dealer now has the new Panatomic-X in 35mm and all Kodak Tri-X roll-film sizes, Nos. 120, 620, 127, 135, and 828. Together, these two Kodak films give you a range from the finest image texture and sharpness to the maximum speed for tough light-and-action situations. Put them both to work for you—*now.*
